

WEIJUN WANG

An interactive/game designer focused on research, exploration, and implementation of digital technologies and future interaction experiences. Proficient in systematic logic construction and interactive prototyping, with practical C# and Python programming experience. Skilled in mainstream engines such as Unity and Unreal Engine, familiar with DCC tools including Maya and Houdini, and experienced in graphic design. Capable of independently managing the full development pipeline from design to implementation, while also possessing solid team collaboration experience.

EDUCATION

**Ontario College of Art & Design University
(OCAD University), Toronto**

Sep. 2023 – Jun. 2026

Major: Digital Futures, Bachelor of Design with Honors

GPA: 3.3/4, Top 20%

Relevant Courses

Interactive Media Design, Game Design

SKILLS

REAL-TIME & 3D

- Unity (C#, Shader Graph)
- Unreal Engine (Blueprints, PBR)
- Houdini (SOPs/DOPs)

DESIGN & VISUALS

- Adobe Creative Suite (Photoshop, Illustrator, Indesign)
- Branding & Identity
- Typography

DEVELOPMENT & TECH

- Scripting
- Interactive Media

PROCESS

- Rapid Prototyping
- Cross-functional Collaboration

Recent Project Experience

3D Game Design & Development | UFO RUN & Dust Spirits | Unity (C#) | OCAD & UofT (Apr. 2026)

- Led the development of a spatial exploration DEMO driven by immersive narrative. Responsible for the character 3D controller, interaction mechanics, and level design. Oversaw team development and test environment setup, fine-tuned physics collision feedback and visual effects, and resolved runtime technical bugs to ensure smooth project progress.

Procedural Generation & Visual System Design | Glow Path & Entropy Reconfiguration | OCAD (Feb. 2026)

- Developed procedural pathfinding algorithms and dynamic generation systems using Houdini. Constructed complex node networks that translate underlying mathematical rules and physical algorithms into stochastic generative art, exploring growth morphologies of digital systems. Optimized visual rendering pipelines to achieve highly responsive visual outputs driven by logical rules.

UI/UX & Complex Information Architecture Design | S.T.A.C.S. Tactical System (May 2026)

- Designed an interactive interface prototype for a starship tactical command system set in a hard sci-fi universe. Architected sci-fi style UI/UX for high-density information environments, optimizing parameter charting and data visualization for multi-dimensional operational commands, ensuring intuitiveness and readability.

Interactive AI Visual Simulation | Algorithmic Environment Web (p5.js) | OCAD (Jan. 2026)

- Conceived and developed a web-based simulation project exploring the intersection of AI, non-human intelligence, and human perception. Built high-performance web simulations using p5.js, transforming invisible data environments into intuitive, visual, and highly responsive interactive feedback interfaces.

Cinematic Audiovisual Short Film | Unreal Engine (Niagara, Blueprints, Sequencer) | OCAD (Oct. 2025)

- Produced a non-narrative cinematic short film in Unreal Engine, reconstructing an immersive rainy urban scene of downtown Toronto using Google Maps 3D data. Simulated complex rain physics and atmospheric effects with Niagara particle systems and Blueprints, significantly enhancing visual depth. Choreographed smooth camera animations in Sequencer and managed post-processing pipelines to
